

# Electrical Inspections

Allianz Engineering has been appointed by Howden to provide an electrical inspection offering for their Sports Club clients to enable them to meet their obligations under the Electricity at Work Regulations (EaWR)

Maintaining safe electrical installations is of critical importance to prevent injury to the users of the club and also prevent fires. Allianz Engineering has joined with Howden to offer a cost effective solution to help your club maintain safety for all of its users.

Electrical installations, unless they are maintained in a safe condition, will deteriorate.

The Health and Safety Executive (HSE) state that 'The best way to find out if your electrical installation is safe is to have it inspected and Tested.'\*

## Why is this important to your Sports Club?

- Maintain safety for members and guests
- Helps prevent loss of playing facilities
- Compliance with legal responsibilities
- Identify defects earlier, saving money in the long run
- Compliance with insurance policy terms and conditions

Allianz Engineering is one of the leading inspection providers in the UK and is fully accredited by the National Inspection Council for Electrical Installation Contracting (NICEIC).

## What is the objective of the Fixed Wiring Inspection and Test?

To ascertain compliance with the latest edition of BS7671 (also known as the IET Wiring Regulations) and the Electricity at Work Regulations and to verify that the installation is being properly maintained and is in a safe condition.

The inspection will be of all of all of your sports club's accessible electrical parts and will include testing of 20% of the sub mains and final circuits, subject to any agreed limitations.

\* Source : Health & Safety Executive document: INDG231

You will be issued with a report of inspection and test which will have a recommended periodicity of up to three years, although swimming pools will be reported separately with a recommended periodicity of up to one year.

## What is the objective of Portable Appliance Testing (PAT)?

To ensure compliance with the guidance provided in the IET Code of Practice for 'In-service Inspection & Testing of Electrical equipment'. The service includes a thorough visual inspection of the equipment coupled with the appropriate testing. We also complete the following identified minor repairs as part of the standard service:

- Remaking of incorrect terminations within plug
- Refitting of damaged or defective plugs
- Replacement of incorrect or ineffective fuses

The recommended periodicity depends on the type and use of the equipment, but unless you request otherwise, we will advise one year.
